Index to volume 14

Subjects

(*L*) denotes letter to the Editor,
(*N*) short note,
(*R*) conference or exhibition report.

Alternative technology *1*
Alternatives for science education *201*
Apparatus, Physics *333(L)*
ASE manufacturers' exhibition *232(R)*
Astrodynamics *68(L)*
Astronomy in our cultural heritage *66(R)*
Astronomy teaching, Undergraduate *201(R)*

Barkla C G and the J phenomenon *52*
Black-body radiation *332(L)*
Brownian motion *6(L)*

CAL with microcomputers, Physics *7*
Capacitor: a discussion topic, The push-me-pull-you *91*
CERN film—Open university and *329*
Computer managed independent learning in A-level physics *14*
Crookes radiometer, Quantitative use of a *58*
Curricula, Design and development of physics *120*
Curriculum project: racing chariot or tumbril? *98*

Damped oscillation, An alternative method for solving the elementary equation for *45, 220*
Decay of ^{58}Co, An experiment on the *322*
Dendrites in cyclohexanol, Formation of *249*
Developing countries, Practical work in physics in *334*
Diffraction kit, A simple *101*
Dimensional analysis applied to electricity and mechanics *116*
Doppler effect, Relativistic dynamics of the *105*

Edison, Thomas *436*
Education through physics *350(R)*
Einstein, Albert: anniversary feature *206*
Electric and magnetic forces between parallel-wire conductors *369*
Electronics *252(N), 361, 396(R), 400, 406*
Examination performance at 16+, Sex differences in *280*

Ferroelectric properties of Rochelle salt, An investigation of *100*
Flow, Continuous *333(L)*
Flow: some useful equations, Rates of *224*
Fluid flow, Teaching about *397*
Fluids, Non-Newtonian *432*
Forced oscillations *305*
Fourth-power law, The centenary of the *234*

Galileo and the leaning tower: an Aristotelian interpretation *60, 269(L)*
Girls in science *265*
Glass technology, Physics in *441*

Hall effect, The discovery of *374*
Harris data memory *289*
Helium, Measurement of the critical potentials of *309*
History and quasi-history in physics education *108, 239, 398(L)*
Holography experiments on optical imaging *298*
Holography, Sandbox *228*

Image and reality *329*
Impedance, Reinforcing the study of *250*
Insulation, The cost effectiveness of thermal *427*
Integrated science *205(L)*
Ionosphere, Physics in the *87*

Laboratory in physics education, The role of the *70(R)*
Lens-pinhole spatial filter *56*
Liaison officers, Schools *358*

Mathematical modelling: a new approach to teaching applied mathematics *82*
Mechanics, Dimensional analysis applied to electricity and *116*
Michelson-Morley experiment, Special relativity and the *218*
Microcomputers, Physics CAL with *7*
Microprocessors *268, 396(R)*
Mirrors, Aluminised thin film plastic *428*
Modular courses in technology at O-level and CSE *255*
Mpemba effect *410*

N and F proposals *68, 397*
Newton's laws of motion, Lawn bowls and *78*
NPL open days for schools *330*
Nuclear power *5(L), 203(L)*

O-level in electronics, The development of an *361*
-on *205(L)*
Open university and CERN film *329*
Optical fibre systems—a reality at last *292*
Optical imaging, Holography experiments on *298*
Oscillator, Modification of a Unilab v.l.f. *57*
OU after ten years, The *396*

Peel Inlet-Harvey Estuary study *365*
Phase changes and catastrophes, Soap films, *40*
Piaget and physics *4(R)*
Plasma physics experiments, exterior electric probes for *58*
Polytechnics' progress *268*
Pop Physique 77 *243(R)*
Power station game: a study *34*
Poynting vector, An introduction to the *301*
Practical work in physics in developing countries *334*
Practical work in the sixth form *74*
Prism and the telescope, The *380*

Quantum physics, The hidden-variables controversy in *48*
Quasi-history in physics education, History and *108, 239, 398(L)*

Radiation, Black-body *332(L)*
Refraction technique, Seismic *94*
Refractive index of perspex, A simple critical-angle method for measuring the *307*

Sandwich courses—educational advance or modern luxury? *134*
Seismic refraction technique *94*
Sex differences in examination performance at 16+ *280*
Sex differentials in physics education *285*
Soap films, phase changes and catastrophes *40*
Sound in the sixth *20*
Special relativity *213, 218*
Speed or velocity? *205(L)*
Stamps, Physics on: Appendix IX *38*
Stefan's life *399(L)*
Stroboscopic colours under fluorescent light *430*

Teaching practice for lecturers *202*
Technological innovation, Science and *353*
Technology at O-level and CSE, Modular courses in *255*
Telescope, The prism and the *380*
Textbooks, Sexist bias in physics *277*
Trigonometric integral *69(L), 332(L)*

van der Waals gas, A review of some thermodynamic properties of the *422*
Vectors on the c.r.o., Illustrating *246*
Velocity, An analogue technique for learning terminal *103*
Violin and its use for student projects, The *318*
Vision, The effect of humming on *253*
Voltmeter resistance, Measurement of *426*

Wind tunnel made of polystyrene, A small *112*

Young and the theory of diffraction, Thomas *450*

Authors with titles

(*L*) denotes letter to the Editor,
(*N*) short note,
(*R*) conference or exhibition report.

Adler C G and Coulter B L: Quasi-history revisited *398(L)*
Aguilar J L C: see Rodriguez A L P
Armstrong H L: Galileo and the leaning tower *269(L)*
Ashby A: Trends in physics *3(R)*

Bachman A H: Astrodynamics *69(L)*
Barnes F: see Downie J
Bass M D: Continuous flow *333(L)*
Bauer P and Brochet C: Pop Physique 77 *243*
Bausor J: Image and reality *329*
Bell D: Non-Newtonian fluids *432*
Bergamasco G and Zini G: Illustrating vectors on the c.r.o. *246*
Bernal J J: see Rodriguez A L P
Bernal P J J, Vega J M, Calvo J L and Rossell B M A: An analogue technique for learning terminal velocity *103*
Bettencourt D G, Chow T L and Goodwin J M: Sandbox holography *228*
Black R: see Walker W
Bonczak B and Dabrowski J: Holography experiments on optical imaging *298*
Bondi H: Einstein: a lecture on the centenary of his birth *208*
Borrie M S: see Burghes D N
Bottomley J M: see Ormerod M B
Braun E: Science and technological innovation *353*
Brochet C: see Bauer P
Brown M and McMahon H: Computer managed independent learning in A-level physics *14*
Bueno M A: see Rodriguez A L P
Bullock B: The use of models to teach elementary physics *312*
Burge E J: Physics on stamps: Appendix IX *38*
Burghes D N and Borrie M S: Mathematical modelling: a new approach to teaching applied mathematics *82*

Callaghan A H C: see Ledingham K W D
Calvo J L: see Bernal P J J
Chadwick B T: Practical work in physics in developing countries *335*
Chapman B R: Special relativity and the Michelson-Morley experiment *217*

Chow T L: see Bettencourt D G
Coisson R and Rancan E: Quantitative use of a Crookes radiometer *58*
Colbeck J: Teaching practice for lecturers *202*
Colbeck J: The curriculum project: racing chariot or tumbril? *98*
Colbeck J: What's wrong with teaching physics? *393*
Colles M J: Applied physics at Heriot-Watt *31*
Cooke C: The cost effectiveness of thermal insulation *427*
Coulter B L: see Adler C G
Cox M E: The lens-pinhole spatial filter *56*
Culpin M F: Formation of dendrites in cyclohexanol *249*
Cuthbert L G: The development of an O-level in electronics *361*

Dabrowski J: see Bonczak B
Davies B: Astronomy in our cultural heritage *66(R)*
Davies B: European exchange *265*
Deeson E:-on *205(L)*
Deeson E: OU + CERN = Great film *329*
Deeson E: Speed or velocity? *205(L)*
Deeson E: The OU after ten years *396*
Donovan P E: An investigation of the ferroelectric properties of Rochelle salt *100*
Dougal R C: A simple critical-angle method for measuring the refractive index of perspex *307*
Dougal R C: Education through physics *350*
Dougal R C: The centenary of the fourth-power law *234*
Downie J and Barnes F: A small wind tunnel made of polystyrene *112*

Edwards D F A: Trigonometric integral *69(L)*, *332(L)*
Elwell M J: see Muir D H T

Fairbrother R W: N and F: RIP? *397*
Fendley J: Measurement of the critical potentials of helium *309*
Fernandez J M V: see Rodriguez A L P
Finn C B P: Physics and medical physics at Sussex *26*
Flinn E A: Electronics and microprocessors at the University of Salford *396(R)*
Foster M S: see Winter A T
Franklin A: Galileo and the leaning tower: an Aristotelian interpretation *60*
Freeman M: Cooler still—an answer? *417*
Fremlin J H: Nuclear power *204(L)*

Gale C A: see Parkin J I
Gell J A: More physics: less relevance *266(R)*
Giblin R: The nature and implications of the revolution in electronics *406*
Gilbert J K: Piaget and physics *4*
Godby R N: see Winter A T
Goodwin J M: see Bettencourt D G
Gosling W: Electronics *400*
Gough C E: The violin and its use for student projects *318*

Harding J: Sex differences in examination performance at 16+ *280*
Harris J: The hairpin in the bottle *436*
Heath M and Rastin B C: Physics courses at Nottingham *27*
Heavens O S: Trigonometric integral *332(L)*
Henbest N: Undergraduate astronomy teaching *201(R)*
Hinson D J: Astrodynamics *68(L)*
Hodgson B: Girls in science *270*
Hopkins J C: see Sullivan R A L
Howes R W: Nuclear power *5(L)*

Jackson D F: Girls in science *265*
Jafri A V: Design and development of physics curricula *120*
Jeans A F: Nuclear power *203(L)*
Jones R: Exterior electric probes for plasma physics experiments *59*

Keys W P: see Ormerod M B
Kilby G E: Astrodynamics *69(L)*
King W H: The push-me-pull-you capacitor: a discussion topic *91*
Kwok C K and Tilley D R: A review of some thermodynamic properties of the van der Waals gas *422*

Leadstone G S: The discovery of the Hall effect *374*
Ledingham K W D and Callaghan A H C: An experiment on the decay of ^{58}Co *322*
Lenz J: An alternative method for solving the elementary equation for damped oscillation *45*
Lovett D: Soap films, phase changes and catastrophes *40*
Lovett R M: Physics apparatus *333(L)*

McCaughan J B T: Black-body radiation *332(L)*
McMahon H: see Brown M
McMillan P W: Physics in glass technology *441*
McMorris M N: Relativistic dynamics of the Doppler effect *105*
Mander M: Sandwich courses—educational advance or modern luxury? *134*
Marx G: The physics laboratory in Eastern Europe *341*
Mastebroek H A K and van der Kooi J B: The effect of humming on vision *253*
Midwinter J E: Optical fibre systems—a reality at last *292*
Millar J W L: The power station game: a study *34*
Morton N: An introduction to the Poynting vector *301*

Morton N: Electric and magnetic forces between parallel-wire conductors *369*
Morton N: Thomas Young and the theory of diffraction *450*
Mpemba E B and Osborne D G: Cool? *410*
Muir D H T and Elwell M J: The Harris data memory *289*
Murkett A J: Physics in the ionosphere *87*

Newton D P: Practical work in the sixth form *74*

Ormerod M B with Bottomley J M, Keys W P and Wood C: Girls and physics education *271*
Osborne D G: Mind on ice *414*
Osborne D G: see Mpemba E B

Packer M A: NPL open days for schools *330*
Page R: Modular courses in technology at O-level and CSE *255*
Parkin J I and Gale C A: Integrated science *205(L)*
Parry D J: Measurement of voltmeter resistance *426*
Patterson H and Twidell J W: Applied physics at Strathclyde *32*
Pinch T J: The hidden-variables controversy in quantum physics *48*

Raat J H: The education of physics teachers in the Netherlands *447*
Rancan E: see Coisson R
Rastin B C: see Heath M
Richmond P E: Alternative technology *1*
Richmond P E: Who needs laboratories? *349*
Robertson I S: Rates of flow: some useful equations *224*
